Orlando, FL | 954-213-7892 | [sebastiankeltz@icloud.com](mailto:sebastiankeltz@icloud.com) | [LinkedIn](#) | [Portfolio](#)

## EDUCATION

|                                                                                                                                                                                                            |                    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|
| <b>University of Central Florida</b> Orlando, FL                                                                                                                                                           | Expected June 2027 |
| Bachelor of Science in Electrical Engineering                                                                                                                                                              | GPA: 3.11          |
| <ul style="list-style-type: none"><li>Relevant Coursework: Circuit Analysis, Electronics, Electronics Laboratory, Power Systems Analysis, Linear Control Systems, Fundamentals of Electric Power</li></ul> |                    |
| <b>Florida Gulf Coast University</b> Fort Myers, FL                                                                                                                                                        | December 2024      |
| Associate of Science in Software Engineering                                                                                                                                                               | GPA: 3.34          |

## TECHNICAL SKILLS

- Programming:** C, MATLAB, TypeScript, JavaScript
- Engineering Software:** PowerWorld Simulator, LTspice, Autodesk Fusion, Arduino IDE
- Development:** React, Next.js, Supabase, Git/GitHub
- Certified SOLIDWORKS Associate (CSWA)**

## ENTREPRENEURIAL & SOFTWARE EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                         |              |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <b>Founder &amp; Developer — OurWay</b>                                                                                                                                                                                                                                                                                                                                                                                 | 2026–Present |
| <ul style="list-style-type: none"><li>Founded and developed <b>OurWay</b>, a campus social platform designed to help students discover, join, and manage university clubs and organizations.</li><li>Built the full-stack application using <b>Next.js, React, TypeScript, and Supabase</b>, implementing authentication, organization profiles, rosters, calendars, officer roles, and administrative tools.</li></ul> |              |

|                                                                                                                                                                                                                                                                                                                   |              |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <b>Independent Game Developer</b>                                                                                                                                                                                                                                                                                 | 2026–Present |
| <ul style="list-style-type: none"><li>Designing and developing an original action game featuring wave-based combat, upgrade progression, enemy AI, weapon systems, and boss encounters.</li><li>Prototype and refine gameplay systems through iterative development, testing, debugging, and balancing.</li></ul> |              |

### Eagle Scout

|                                                                                                                                                                                                                                    |                             |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| Boy Scouts of America - Miami, FL                                                                                                                                                                                                  | August 2007 - December 2021 |
| <ul style="list-style-type: none"><li>Led and managed a community service project benefiting local community</li><li>Demonstrated leadership, teamwork, and long-term commitment through achievement of Eagle Scout rank</li></ul> |                             |

## ENGINEERING PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                       |                             |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| <b>ESP32 Smart-Home Monitoring System (Independent Project)</b>                                                                                                                                                                                                                                                                                                                       | 2026–Present                |
| <ul style="list-style-type: none"><li>Developed modular C++ firmware for an ESP32-S3 and integrated a BME280 environmental sensor over I<sup>2</sup>C for live temperature, humidity, and pressure measurements.</li><li>Designed and tested embedded sensor functionality using serial diagnostics and hardware integration.</li></ul>                                               |                             |
| <b>Electric Three-Wheel Cooler Scooter (Independent Project)</b>                                                                                                                                                                                                                                                                                                                      | September 2025-January 2026 |
| <ul style="list-style-type: none"><li>Designed and built a three-wheel electric scooter using two 18 V, 8 Ah batteries in series to create a <b>36 V power system</b>.</li><li>Integrated a DC motor, motor controller, and throttle; evaluated voltage, current, torque, runtime, and system performance under load.</li></ul>                                                       |                             |
